

73. Set Matrix Zeroes

0 0 0 0 0

row_zero_zero (bool) - zero out 0th row (since [0][0] is 0th col)

Since every row/col can be 0'd out if a 0 is in its row/col, we can use the 0th row & col as storage since that element will be overwritten anyway

TC: $O(mn)$
